

Comparison with OPTICS on our running example, i.e. the data displayed in Figure 7 and Table 1.

The reachability plot of the 'Moons' data (cf. Table 1, 1st column) does not show a clear cluster structure.

Also, the same for the running example without outlier, i.e. the data set 'No outlier' in Table 1 (second column).

Also, for other parameter settings, OPTICS gives similar results on both data sets. (Epsilon = 10, 30, 0.3). Results are not shown.
